

# Voice

Every business requires a different voice service plan to optimize communications. Access One gives you the ability to choose from a wide array of local and long distance services that are scalable, secure and cost effective.

## Local Voice

A local circuit is ideal for businesses with high local call volume, as it provides high capacity, high quality delivery of voice services at low cost per minute rates.

## VoIP

SIP (Session Initiation Protocol) trunks allow VoIP services to pass along, resulting in increased productivity through improved network response times.

## Long Distance

A dedicated circuit is designed to carry high volume long distance traffic at low cost per minute rates. This solution is ideal for businesses with high long distance call volumes.

## Audio & Web Conferencing

Choose from a full suite of conference options to effectively communicate with multiple groups in a matter of minutes anytime, anywhere. Enjoy 24/7 on-demand availability as well as operator-assisted conferencing.

*“We recently concluded a complicated port order that needed to happen without time-consuming mistakes or service interruption. To summarize the experience with Access One, I offer an excerpt from an email I sent them. Thanks for being so helpful and attentive! Is there something wrong with me if I get excited about how great my telecom company is?”*
