

# Hosted PBX Basics

Welcome to Access Cloud Hosted PBX! You should see a new phone on your desk. Below is a guide to familiarize you with this enhanced phone system and how to use its most commonly used features. Your phone has many more features and tools included as well, such as a web portal accessible through your computer. Please see below to learn about the basic functionality, the web portal and additional resources to help maximize your Hosted PBX experience. Enjoy!

## Setting up Voicemail

1. Press the Message button from your phone.
2. The voicemail system will walk you through setting up your password, recording your name and recording a greeting. (After setting up voicemail, to check voicemail, follow step 1, and enter your password when prompted.)

## Transferring a Call

1. While on a call, you may need to select the More button prior to step 2.
2. Select the Transfer button (caller will hear hold music).
3. Enter the phone number and/or extension number to transfer the call to.
4. Then press the Dial button.
5. Wait for individual to answer the call; then announce the caller.
6. Then press the Transfer button again (call has been transferred).

## 3-way Conferencing

1. While on a call, you may need to select the More button prior to step 2.
2. Press the Conference button (caller will hear hold music).
3. Enter the phone number and/or extension number to conference.
4. Press the Dial button.
5. Once the individual answers the call, press the Conference button again to connect all callers.

\*If the call's originator places the call on hold, all parties will then be on hold.

## Logging into Web/CommPortal

1. Log into CommPortal at: <https://commportal.accessoneinc.net>
2. Enter your user name (your assigned 10-digit number)
3. Enter your temporary password (provided by your admin)
