

Managed IT Puts Power into a DIGITAL TRANSFORMATION

Digital transformation is a high priority with a growing number of businesses, and with that priority comes a demand for shortcuts to make digital transformation happen. One of the best such shortcuts is the use of managed IT, which can help drive a digital transformation.

What Managed IT Can Do for a Digital Transformation

Managed IT offers several useful tools to help affect digital transformation, as well as manage it afterward.

Network visibility

An Ixiacom study¹ noted that greater network visibility meant greater IT productivity in 47% of cases. Managed IT can provide that network visibility, which provides improvements on several other fronts.

Greater efficiency

Digital transformation² has been found to remove a wide range of bottlenecks in businesses. By using managed IT, efficiency improves further by taking much of the maintenance burden off internal IT departments.

How Managed IT Can Help a Digital Transformation

Bridges the skills gap

Digital transformation tied for the second biggest worry in a CompTIA study³ at 57%.

- Having managed IT provides access to expertise across the technology spectrum, negating the skills gap.

Competitive edge

A CenturyLink study⁴ found that 92% of all companies either will use or have already used third party resources to achieve digital transformation, and 54% partner with a preferred provider.

- Those who don't use third-party resources are in the minority and are likely to fall behind.

Manage complexity

Since most organizations aren't built around a single digital transformation platform⁵, that means there's a lot of complexity involved in the process.

- Using managed IT makes the process simpler for the end user.

How to Get Managed IT Behind Your Digital Transformation

To get managed IT behind the digital transformation process, start by getting in touch with us at Access One. We have a range of customized solutions for business needs and can supply the managed IT options necessary to make your transition smooth and your ongoing operations simple.
