TARIFF FORMAT

- A. **Page Numbering** - Page numbers appear in the upper right corner of the page. Pages are numbered sequentially. However, new pages are occasionally added to the tariff. When a new page is added between pages already in effect, a decimal is added. For example, a new page added between Page 14 and 15 would be 14.1.
- B. **Page Revision Numbers** - Revision numbers also appear in the upper right corner of each page. These numbers are used to determine the most current page version on file with the Commission. For example, the 4th revised Page 14 cancels the 3rd revised Page 14.
- C. **Paragraph Numbering Sequence** - There are various levels of paragraph coding. Each level of coding is subservient to its next higher level:
- 2
 - 2.1
 - 2.1.1
 - 2.1.1.1
- D. **Check Sheets** - When a tariff filing is made with the Commission, an updated Check Sheet accompanies the tariff filing. The Check Sheet lists the pages contained in the tariff, with a cross-reference to the current revision number. When new pages are added, the Check Sheet is changed to reflect the revision. An asterisk designates all revisions made in a given filing (*). There will be no other symbols used on this page if these are the only changes made to it (i.e., the format, etc. remain the same, just revised revision levels on some pages.) The tariff user should refer to the latest Check Sheet to find out if a particular page is the most current on file with the Commission.

SECTION 7 - NETWORK SWITCHED SERVICES**7.2 SERVICE DESCRIPTIONS AND RATES (continued)****7.2.3 Local ISDN-PRI Service****1) General**

Local ISDN-PRI – Integrated Services Digital Network Primary Rate Interface (ISDN PRI) is a digital business service that provides PBX equipment and host computer access to a wide variety of switched services. These switched services include circuit switched voice (local calling, Message Toll Service, 800 and circuit switched data. Each ISDN PRI will allow connection of the aforementioned services via a single central office connection. This service allows PBX equipment and host computer type devices to connect to central office services in bulk quantity, rather than on a line by line or service by service basis. Local usage rates are as specified within this tariff.

Each ISDN PRI connection provides access from a Customer premises to the Company's circuit switched voice and circuit switched data via a 1.544 Mbps central office port termination and a 1.544 Mbps Digital Local Loop to the Customers premises. The Digital Local Loop is a DS1 with Clear Channel Capability. The rates and charges for the Loop are in addition to those for the ISDN PRI Port Connection. The central office port connection is provided in base capacities of twenty-three 64 Kbps "B" channels and one 64 Kbps "D" channel (23B+ D). The "D" channel is used for out-of-band signaling and control of the "B" channels. Where technology permits, "D" channels can be shared by multiple ISDN PRI's for the same Customer. "B" channels can be dedicated to each circuit switched voice and circuit switched data service by type or they can be shared among service types by using the call by call feature.

Where appropriate facilities do not exist, Special Construction charges will apply, as described within this tariff.

"B" Channel – "B" Channel (Bearer Channel) is a 64 Kbps digital channel capable of transporting circuit switched voice and circuit switched data.

"D" Channel – "D" Channel (Delta Channel) is a 64 Kbps digital channel used to transport signaling and control the B channels.

Out of Band Signaling – Out of Band Signaling is signaling that is separated from the channel carrying the circuit switched voice and data services.

SECTION 7 - NETWORK SWITCHED SERVICES**7.2 SERVICE DESCRIPTIONS AND RATES (continued)****7.2.3 Local ISDN-PRI Service (continued)****1) General (continued)**

Dynamic Channel Allocation – Allows the circuit switched voice and data services enabled on the ISDN PRI to share "B" channels and arrange them as a single trunk group. This allows incoming and outgoing circuit switched voice and data calls to utilize "B" channels on a call by call basis. Without this capability, each service will have a dedicated "B" channel.

Calling Number Delivery – All calling numbers presented to the services working on ISDN PRI can be delivered to the Customer's CPE, including calls made to Direct Inward Dialing Service telephone numbers. This feature is optioned on a per ISDN PRI Port basis only and is offered in appropriately equipped central offices.

Clear Channel Capability – The "B" channels on the ISDN PRI are clear, since all signaling and control functions are handled by the "D" channel. This allows all 64 kbps on each "B" channel to be used for Customer information over the ISDN PRI connection. Calls over the network may either by 56 kbps or 64 kbps depending on the public network in place between the ISDN PRI and the distant end of the call.

Digital Voice Transmission – All voice calls are transmitted using digital signaling.

Channel Configuration – Allows some or all B Channels to be dedicated to exchange and MTS, DID, or 800 Services. Multiple dedicated trunk groups can be established on the same primary port or group of primary ports.

Direct Inward Dialing Signal – Permits incoming dialed calls from the exchange network to reach a specific number serviced by Customer-premises equipment (CPE) without the assistance of an attendant. It also provides for the unique identification of the call based on digits sent to the CPE by the central office. The central office will outpulse digits to the CPE which can further process the calls as desired. Charges associated with blocks of DID numbers are located within this tariff.

Equal Access – Allows the Customer to preselect an Intra and Interexchange Carrier for each circuit switched voice or circuit switched data trunk group. The carrier designation can be changed for applicable charges as shown within this tariff.

SECTION 8 - ADDITIONAL SERVICES**8.1 CENTRAL OFFICE, LINE AND TRUNK FEATURES****8.1.1 General**

The features in this Section are made available on an individual basis or as part of multiple feature packages. All features are provided subject to availability; features may not be available with all classes of service. Transmission levels may not be sufficient in all cases.

Central Office Calling Features are optional features of central office services furnished to individual line end users. The Company may furnish Central Office Calling Features where there is available central office equipment with the proper program updates as determined by the Company. Central Office Calling Features are only provided for basic access line services. The Customer will be billed a charge for each change made to features or a group of features included in the Customer's service.

8.1.2 Description of Line and/ or Trunk Features

The following features are for end user lines:

Call Forwarding Busy Line – This feature automatically reroutes an incoming call to a Customer predesignated number when the called number is busy.

Call Forwarding Busy Line/Don't Answer – This feature automatically reroutes an incoming call to a Customer predesignated number when the called number is busy or when the called number does not answer within the number of rings programmed by the Company.

Call Forwarding Don't Answer -This feature automatically reroutes an incoming call to a Customer predesignated number when the called number does not answer within the number of rings programmed by the Company.

Call Forwarding Variable -Call Forwarding, when activated, redirects attempted terminating calls to another Customer-specific line. The Customer may have to activate and deactivate the forwarding function and specify the desired terminating telephone number during each activation procedure. Call originating ability is not affected by Call Forwarding.

The calling party is billed for the call to the called number. If the forwarded leg of the call is chargeable, the Customer with the Call Forwarding is billed for the forwarded leg of the call.

SECTION 8 - ADDITIONAL SERVICES**8.1 CENTRAL OFFICE, LINE AND TRUNK FEATURES (continued)****8.1.2 Description of Line and/ or Trunk Features (continued)**

Call Trace -Allows a Customer to trace the most recent incoming call by dialing a code to automatically request that the Company record a caller's originating telephone number and the date and time of the call as well as the date and time the Customer initiated trace. The information is disclosed only to a law enforcement agency for investigation and case preparation purposes.

Call Waiting/Cancel Call Waiting -Call Waiting provides a tone signal to indicate to a Customer already engaged in a telephone call that a second caller is attempting to dial in. It will also permit the Customer to place the first call on hold, answer the second call and then alternate between both callers. Cancel Call Waiting (CCW) allows a Call Waiting (CW) Customer to disable CW for the duration of an outgoing telephone call. CCW is activated (i.e., CW is disabled) by dialing a special code prior to placing a call, and is automatically deactivated when the Customer disconnects from the call.

Caller ID -Allows the subscriber to view the listed telephone number from which the incoming call is dialed before the call is answered. The calling number is displayed on a Customer provided compatible device attached to the Customer's telephone line.

Caller ID Deluxe -Allows subscriber to view listed name associated with the telephone number before the phone is answered. The calling number and name are displayed on a Customer provided compatible display device attached to the Customer's telephone line.

Remote Access to Call Forwarding – This feature combines call forwarding with remote access capability. In addition to the current call forwarding feature-access method, the Remote Access Call Forwarding feature provides Customers access from any tone-type address signaling capable telephone. The Customer dials a remote access directory number and then is guided by voice messages to enter their home or office telephone number equipped with the Remote Access Call Forwarding feature, a Personal Identification Number (PIN) and a feature code.

Repeat Call -This Automatic Redial feature allows a Customer to automatically redial the last number dialed. This is accomplished by the Customer activating a code. The network periodically tests the busy/ free status of the called line for up to 30 minutes until both lines are found free and then redials the call for the Customer.

Repeat Call feature also allows Customers, having reached a busy number, to dial a code before hanging up. Repeat Dialing feature then continues to try the busy number for up to 30 minutes until it becomes free. Once the busy line is free the call is automatically redialed and the Customer is notified of the connected call via a distinctive ring.

SECTION 8 - ADDITIONAL SERVICES**8.1 CENTRAL OFFICE, LINE AND TRUNK FEATURES (continued)****8.1.2 Description of Line and/ or Trunk Features (continued)**

The following types of calls cannot be accessed with Repeat Call:

- Calls to 900 and 976 Service numbers
- Calls to 911 -Calls to Directory Assistance
- Calls to toll free 8XX Service numbers
- International Direct Distance Dialed calls

Return Call -Allows the subscriber to automatically redial the number of the last incoming call whether answered or not.

Caller ID Per-Call Blocking (PCB) -This blocking option will allow callers to block the passage of their telephone numbers and/ or names on outgoing calls by dialing a special code, prior to making each call.

Caller ID Per-Line Blocking (PLB) -Caller ID Per-Line Blocking will allow callers to automatically prevent the display of their telephone numbers and/ or names on a permanent basis unless the service is deactivated, on a per call basis, by dialing a special code.

Special Ring – This feature allows a Customer to have up to three (3) separate telephone numbers assigned to one local exchange line. Each telephone number will provide a distinctive ring on incoming calls to allow for identification of the incoming call. A distinctive call waiting tone for each telephone number will be provided, where facilities permit, to Customers also subscribing to call waiting.

Speed Dial 30 -Allows placing calls to thirty (30) other phone numbers by dialing a one or two digit code rather than the complete phone number.

Speed Dial 8 -Allows placing calls to eight (8) other phone numbers by dialing a one or two digit code rather than the complete phone number.

Three Way Calling/Call Hold -The Three Way Calling feature allows a Customer to add a third party to an existing two-way call and form a 3-way call. The call must have been originated from outside the station group and terminate to a station within the station group. The Call Hold feature allows a Customer to put any in-progress call on hold by flashing the switchhook and dialing a code. This frees the line to allow the Customer to make an outgoing call to another number. Only one call per line can be on hold at a time. The third party cannot be added to the original call.
