Wired and Wireless Intrusion Sensors

NEW ALARMS

CLASSIC ALARMS

V LINK

Overview

Verkada's suite of wired and wireless intrusion sensors provide complete building protection for any site. Our wired sensors can be connected to the BP52 Panel, BE32 Expander, or BP41 Panel, while our wireless sensors will automatically connect to the nearest VLink hub. VLink is Verkada's proprietary wireless protocol that optimizes for security, range, and sensor battery life.

Key features

Full protection and visibility

- Full suite of sensors including door, motion, and water leak, as well as panic buttons
- Pair any sensor with a camera for video verification

Easy setup and management

- Wireless sensors automatically connect to the nearest VLink hub - no manual pairing process needed
- Cloud-managed from Command for easy configuration and monitoring

Built to last

- 10-year warranty on all sensors
- Up to 10 years of battery life for wireless door sensors and up to 5 years for other wireless sensors¹
- User-serviceable batteries

1. Real-world battery life depends on a variety of factors
