McLane Company

OVERVIEW

McLane Company, a leading supply chain provider, upgraded security country-wide across its 80 distribution centers with Verkada's cloud-based platform. By replacing outdated DVR systems, McLane gained real-time visibility, remote access, and faster incident response.

McLane can now quickly investigate incidents, standardize security policies, and monitor critical areas from anywhere. By leveraging Verkada's scalable technology, McLane strengthens safety, protects assets, and ensures a resilient, future-proof security infrastructure across its nationwide distribution network.

"It's amazing how fast we can pull data for investigations, which now only takes minutes. I can start an investigation in the morning and, by lunch, have enough video evidence to present to our executive management."

Glenn Master | Head of Asset Protection, Security & Crisis Management

Lynx Logistics

OVERVIEW

LYNX Logistics, a third-party logistics provider specializing in high-value assets, implemented Verkada's integrated, AI-powered security platform to enhance cargo tracking and operational efficiency. By leveraging Verkada's centralized Command platform, LYNX gained real-time visibility into their 96,000-square-foot facility, allowing for swift identification and tracking of containers using unique IDs and vehicle information.

The AI-powered search capabilities enable the team to locate specific containers and monitor their movement throughout the facility, reducing the time spent on manual searches and minimizing potential holding charges.

"Using AI-powered search, we can quickly locate each container by its unique ID and know exactly where cargo is in the facility, as well as which employee unloaded each container, at which dock door, and for how long."

Francisco Garcia | President & Founder

Exertis Supply Chain Services

OVERVIEW

Exertis Supply Chain Services, a global supply chain partner, upgraded its security infrastructure with Verkada to enhance efficiency and visibility across its facilities. By replacing legacy security systems with Verkada's cloud-based platform, Exertis streamlined access control, video security, and incident response.

With AI-powered analytics and seamless integrations, Exertis strengthened security while simplifying management. The transition to Verkada's scalable, user-friendly solution supports Exertis' commitment to innovation and operational excellence, ensuring a more secure and connected global supply chain network.

"If we're investigating a carrier query, such as a delivery, we can locate a specific truck by its colour or size, saving hours of footage review. Being able to quickly save and share clips, along with receiving alerts for any device issues, helps us respond faster and keep operations running smoothly."

Paul Tierney | Site Lead

IFC Global Logistics & Warehousing

OVERVIEW

IFC Global Logistics & Warehousing, an Australian supply chain company, replaced fragmented systems with Verkada's cloud-based platform to unify security across its global operations and get centralized, real-time oversight.

To meet strict compliance requirements, the team uses License Plate Recognition to monitor vehicle access and the Guest system to automate check-ins. Intercoms at key points allow staff to verify identities remotely, improving security and efficiency. Features like Trajectory Analysis and air quality monitoring provide insights for faster incident resolution and proactive maintenance, helping IFC protect assets and ensure compliance.

VCare 24

OVERVIEW

VCare 24, a UK-based provider of secure transport and residential care services, modernized its operations by implementing Verkada's cloud-based security platform.

With Verkada, VCare 24 reduced investigation times to just 10 minutes, achieving a 98% improvement in incident resolution speed. The system's real-time monitoring capabilities allow staff to proactively manage situations, enhancing the safety of both transport personnel and individuals in their care. Additionally, the platform's compliance with GDPR and SOC 2 standards, along with features like face blurring and on-demand audio recording, ensures privacy and regulatory adherence.

We use Verkada in our transport vehicles. We can now livestream the footage straight back to our office. If a transport manager is archiving and reviewing footage, it's just one check box to share with whoever needs to see it.
